

Illumina SNP Genotyping Technologies BeadArray and BeadChip Platform

SNP Genotyping Assay and SNP Multiplexing Level per Sample

- **GoldenGate Assay**

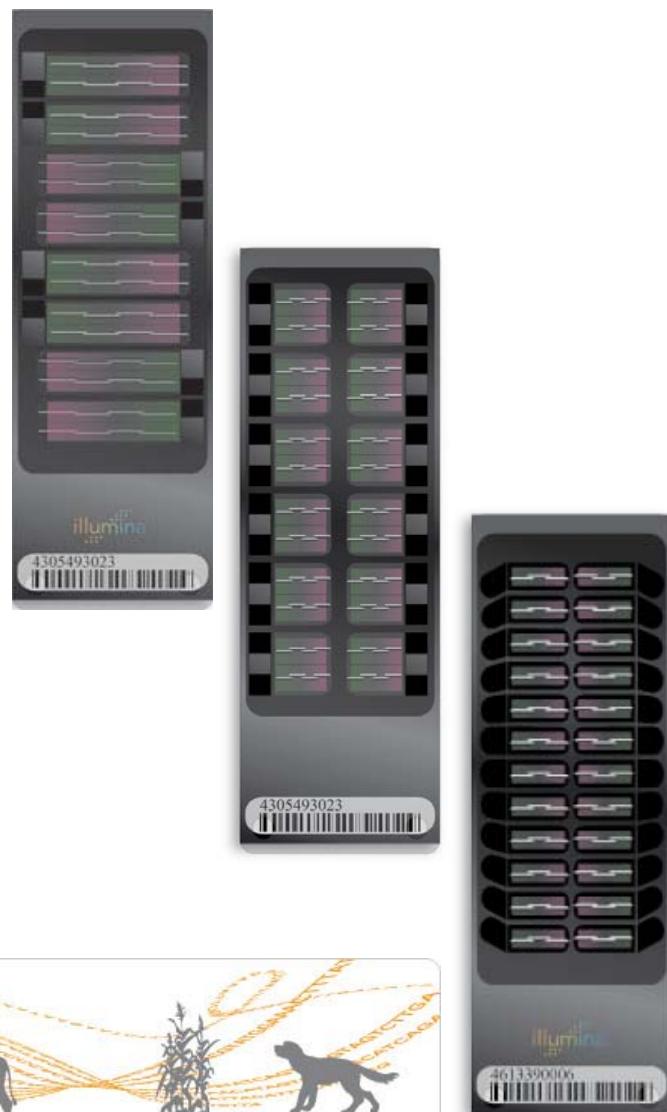

OPA synthesis containing 48, 96, 144, 192, 384, 768, 1536, or 3072-plex SNPs per sample assay

- **Infinium Assay**

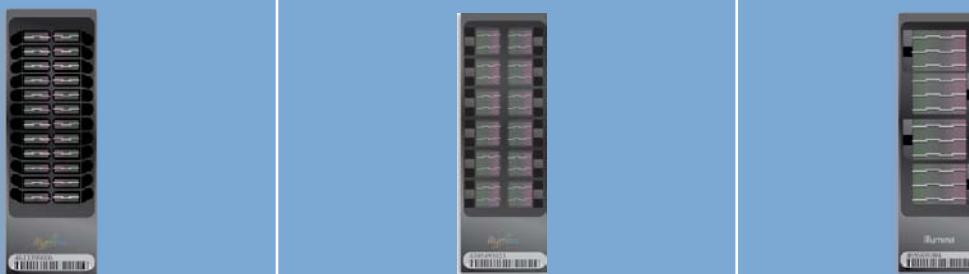

Custom made iSelect chips to assay 3072 up to 1M SNPs per sample.

Infinium products targeted toward Agricultural markets

- ▶ BovineHD BeadChip
 - 8 samples, 777,962 SNPs
- ▶ BovineSNP50 BeadChip
 - 24 samples, 54,609 SNPs
- ▶ CanineHD BeadChip
 - 12 samples, 172,115 SNPs
- ▶ OvineSNP50 BeadChip
 - 12 samples, 54,241 SNPs
- ▶ PorcineSNP60 BeadChip
 - 12-samples, 62,163 SNPs
- ▶ MaizeSNP50 BeadChip
 - 24 samples, 56,110 SNPs
- ▶ iSelect Custom Panels

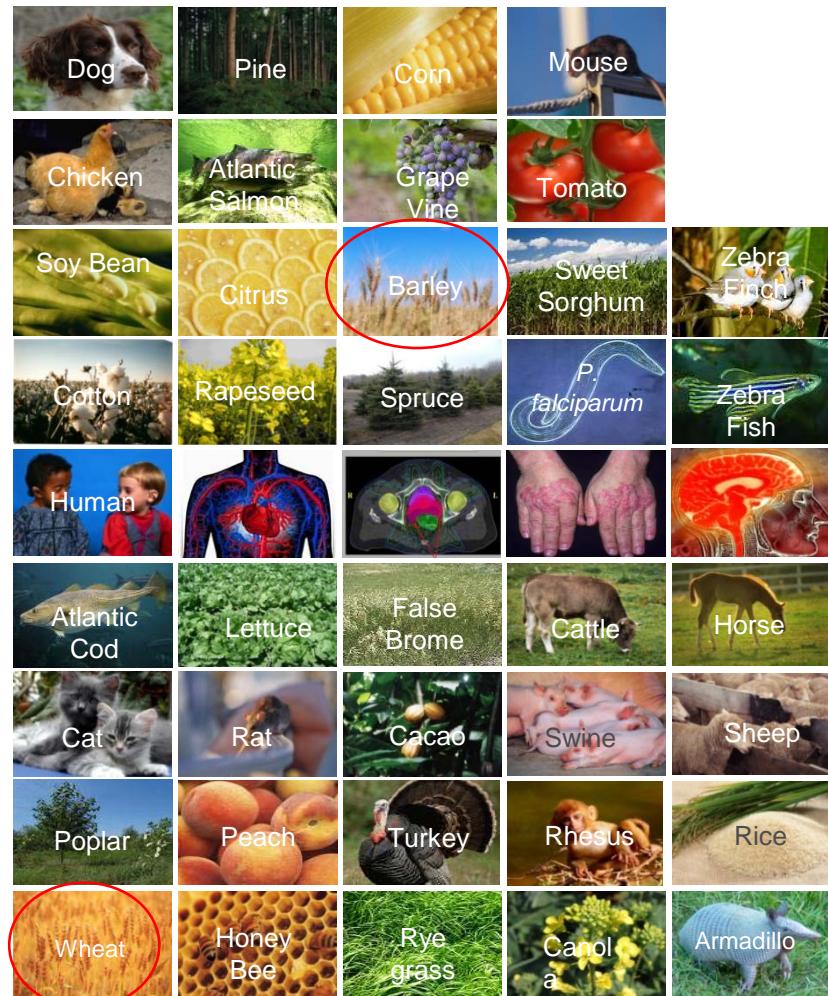

iSelect BeadChip Formats and Supported Marker Densities

			
BeadChip Format	24-sample	12-sample	4-sample
Previous plex range	3,072 – 60,800	60,801 – 200,000	n/a
New plex range	3,072 – 90,000	90,001 – 250,000	250,001 – 1M
Add-on content range*	Up to limit of 90,000	Up to limit of 250,000	Up to limit of 1M

*Add-on content range allowed = (maximum attempted beadtypes on BeadChip) MINUS (existing beadtypes in original pool)

Custom Genotyping on the Infinium Assay

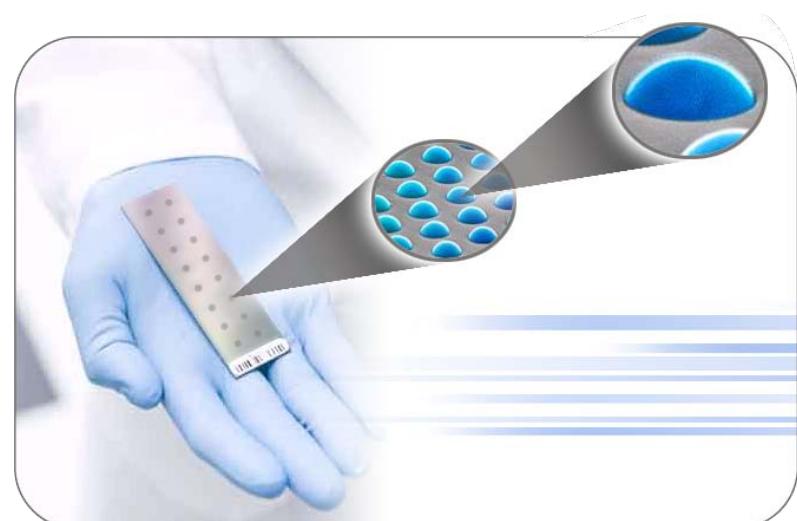

Applications

- ▶ Genome-wide selection
- ▶ Genetic Prediction
- ▶ SNP discovery
- ▶ Commercial Agriculture screening panels
- ▶ Targeted follow-up studies after GWAS
- ▶ Targeted disease panels
- ▶ Targeted rare variant panels
- ▶ Sample QC and tracking panels
- ▶ Consumer Genomics
- ▶ Forensics

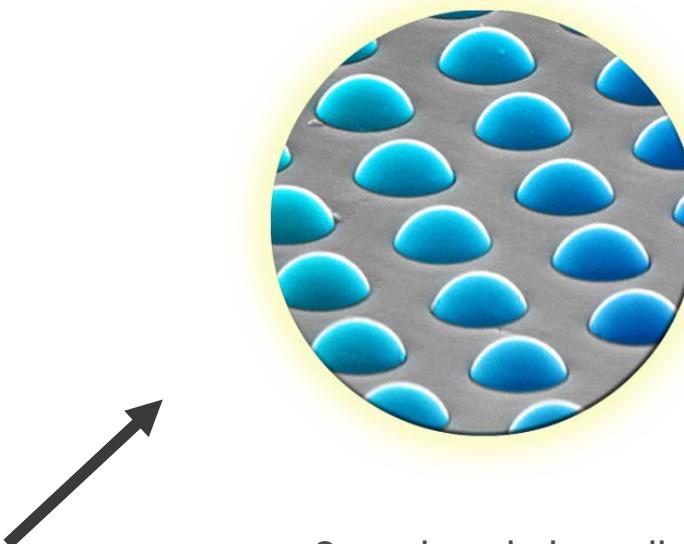

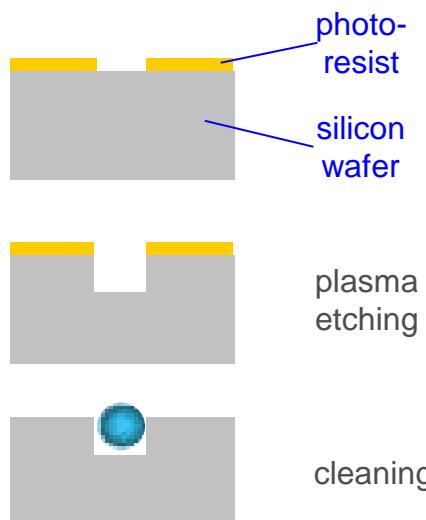

The Right Content Lets You Capture More Biology

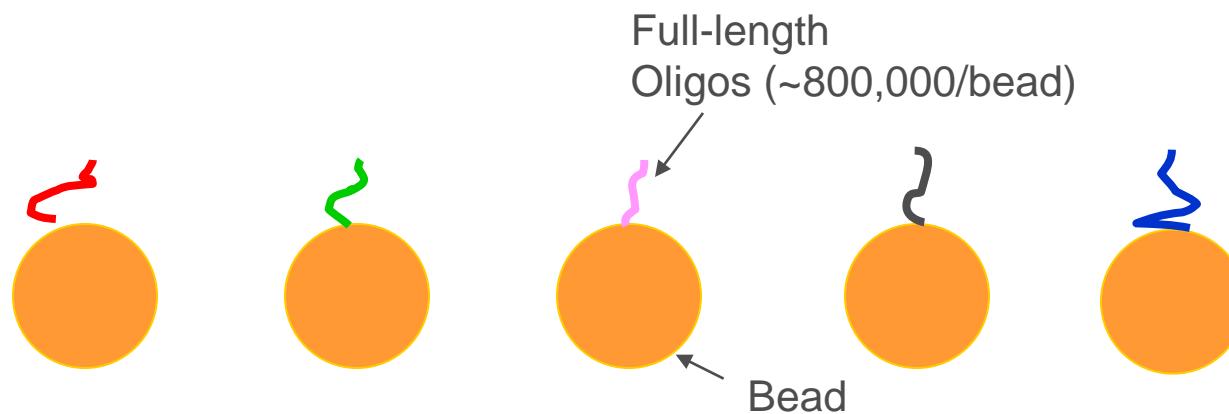

BeadArray technology and BeadChip manufacturing

Microfabrication of BeadChip Wells

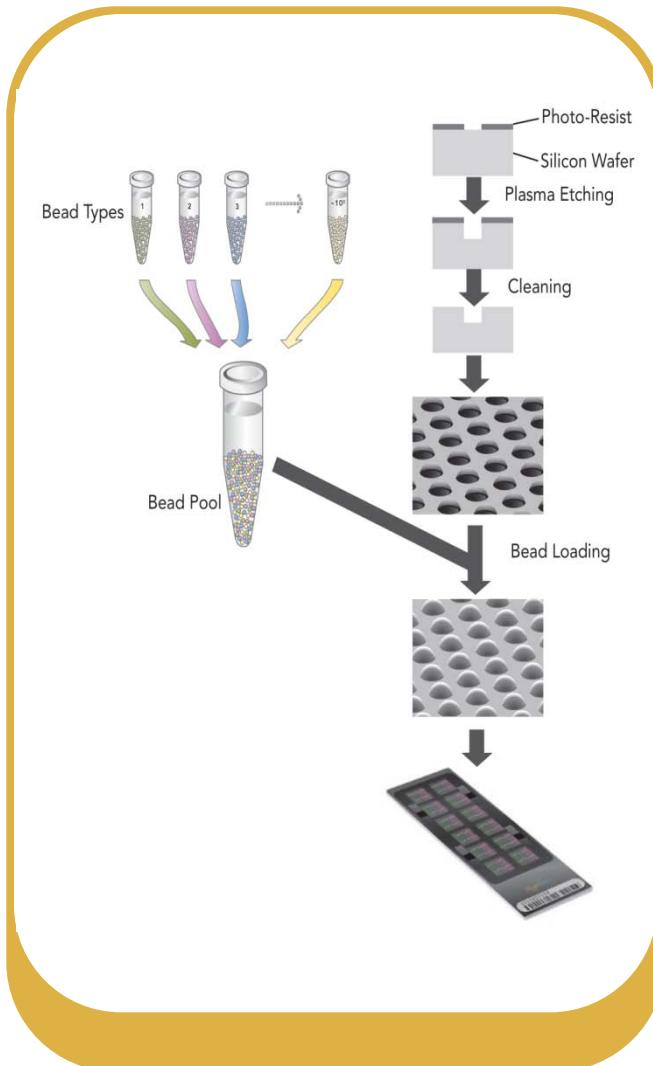

Beads and BeadTypes

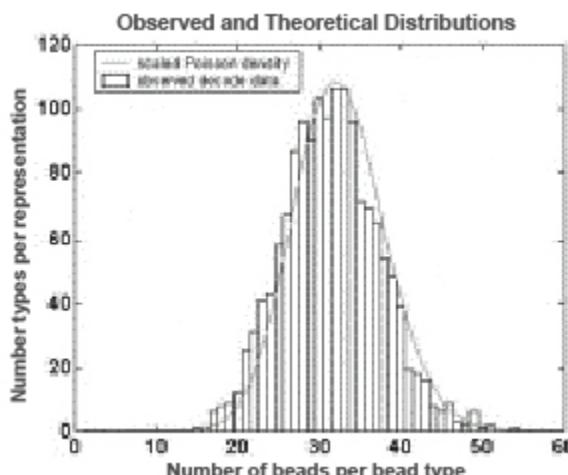

Redundancy: average of ~15 beads per beadtype

Bead Preparation and Array Production

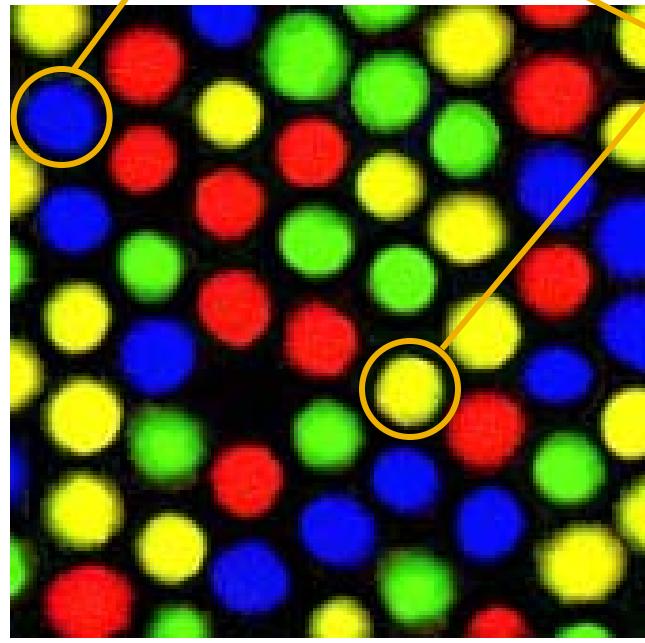

- Unique oligo for each bead type
- Bead Pool can be > 1,000,000 bead types
- Random self-assembly of beads
- Average ~15 beads per beadtype
- Functional validation of array

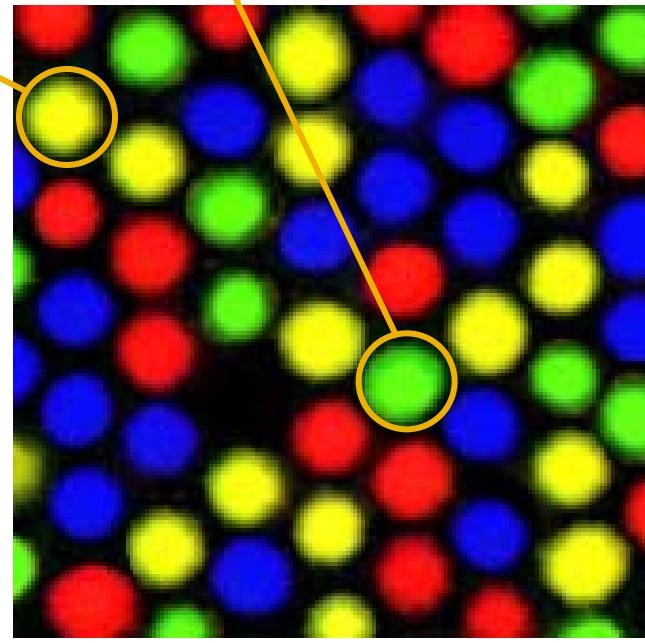

Bead Decoding

Example: 16 Bead Types

Decoder Oligo	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Decode hyb 1																

Decoder hybridization 1

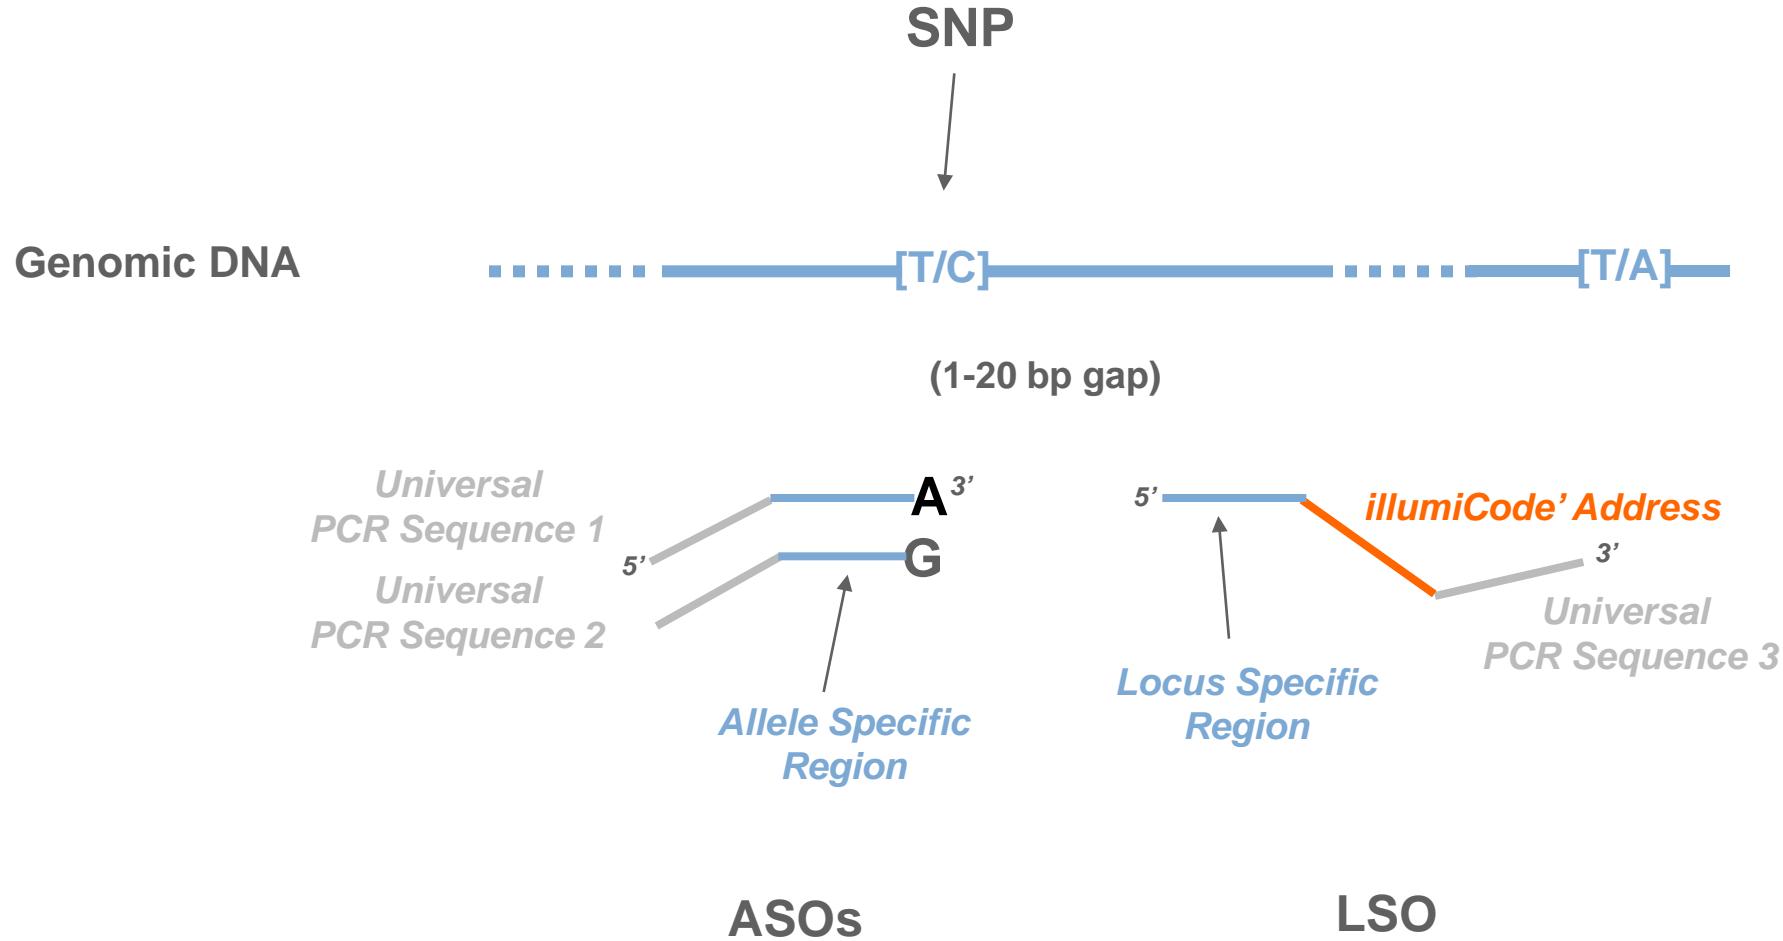

Decoder hybridization 2

Generating a **.dmap** file

GoldenGate Assay Biochemistry

GoldenGate Assay: Primer Design

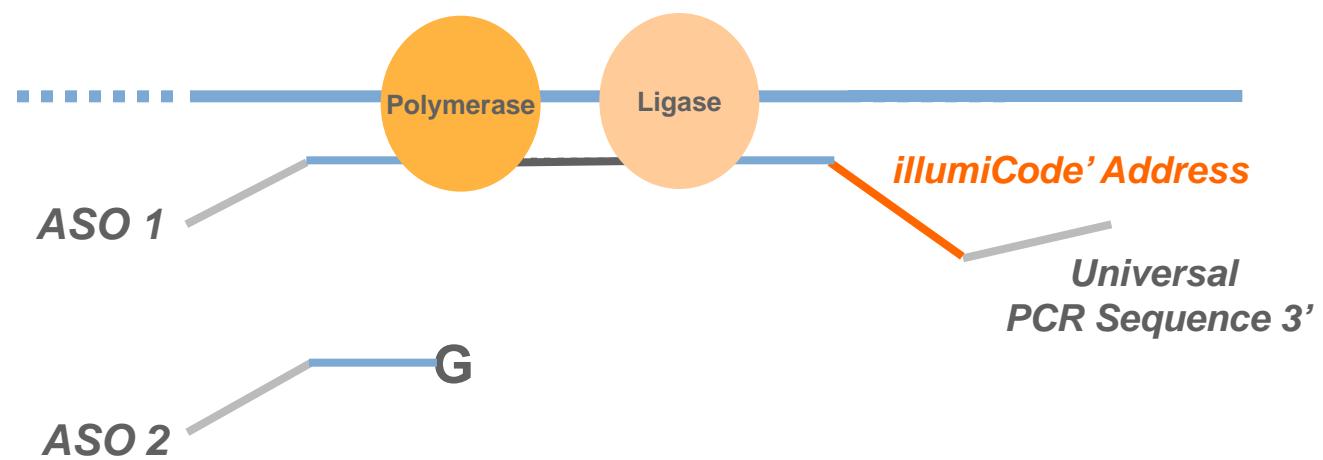

GoldenGate Assay: Biochemistry/Assay Diagram

- Allele-specific extension and ligation

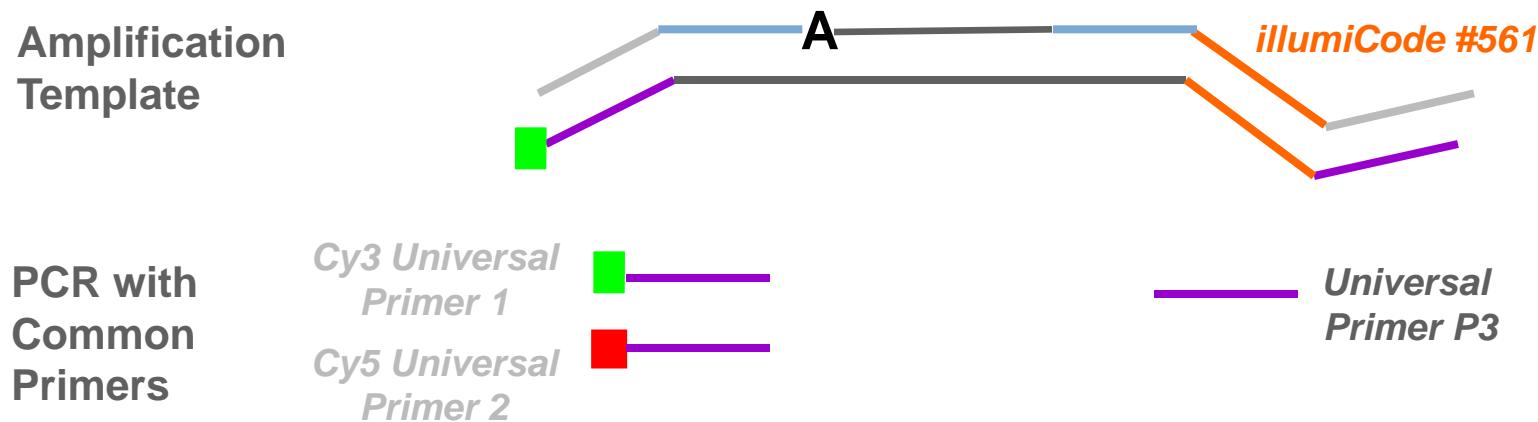

Genomic DNA

Allele Specific
Extension &
Ligation

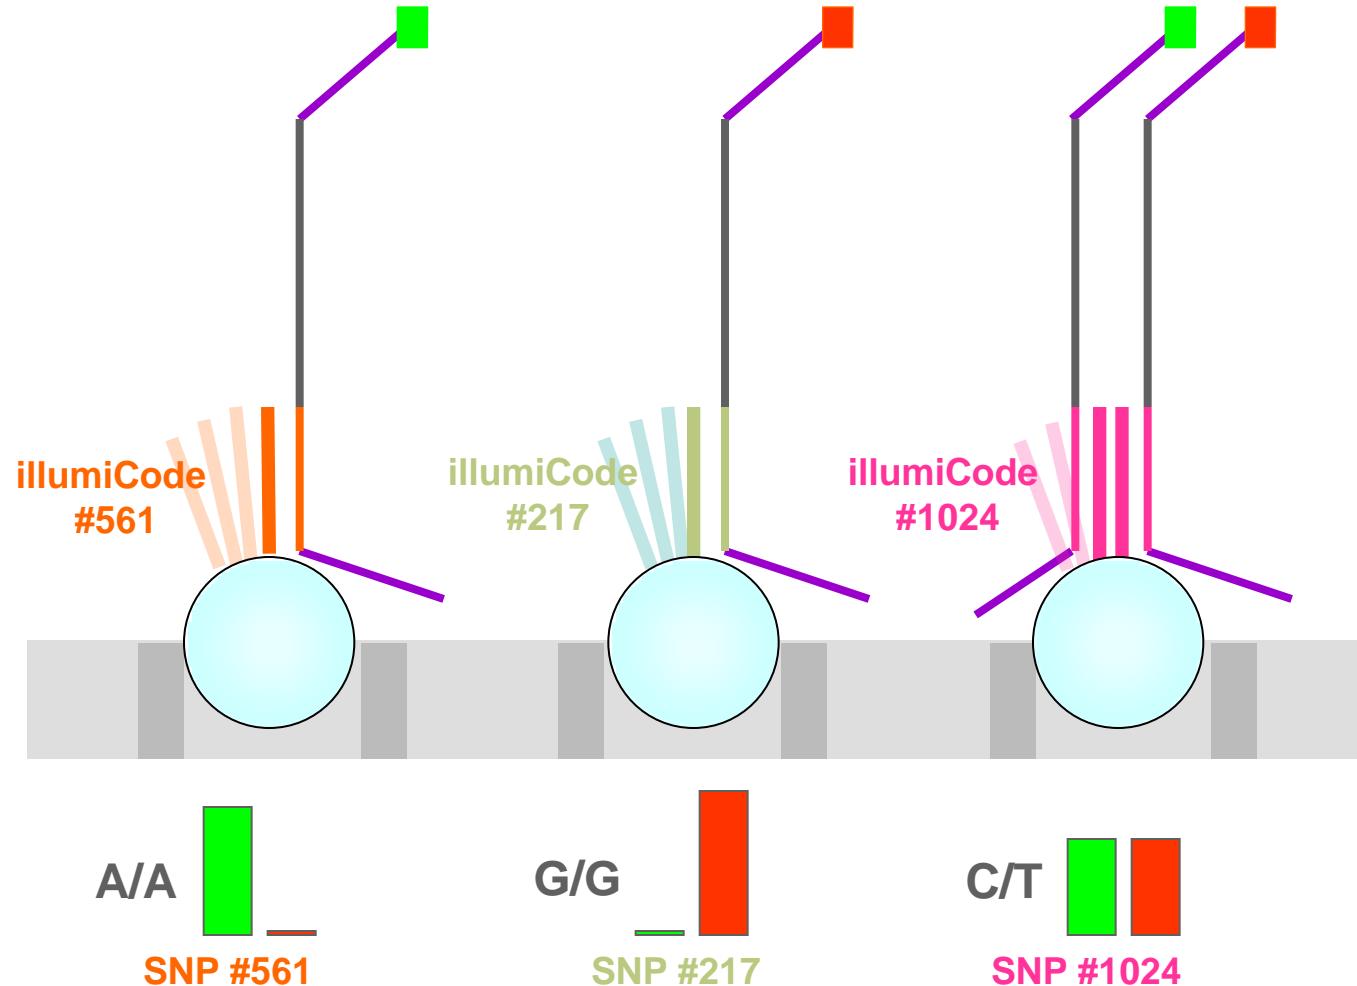

GoldenGate Assay: Biochemistry/Assay Diagram

● Amplification

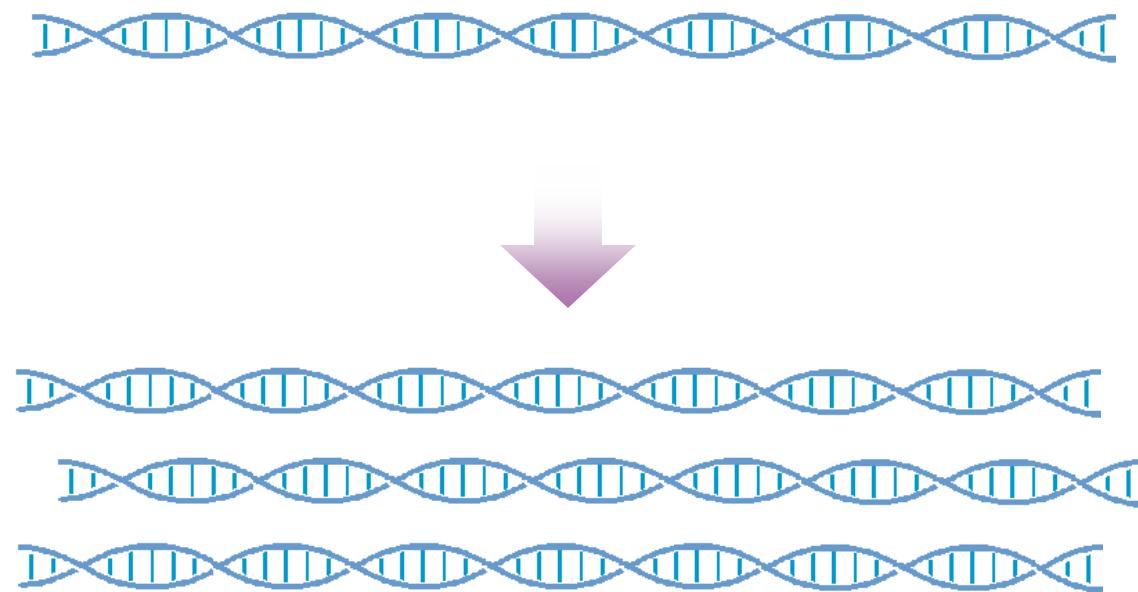

GoldenGate Assay: Biochemistry/Assay Diagram

- Hybridization to VBP

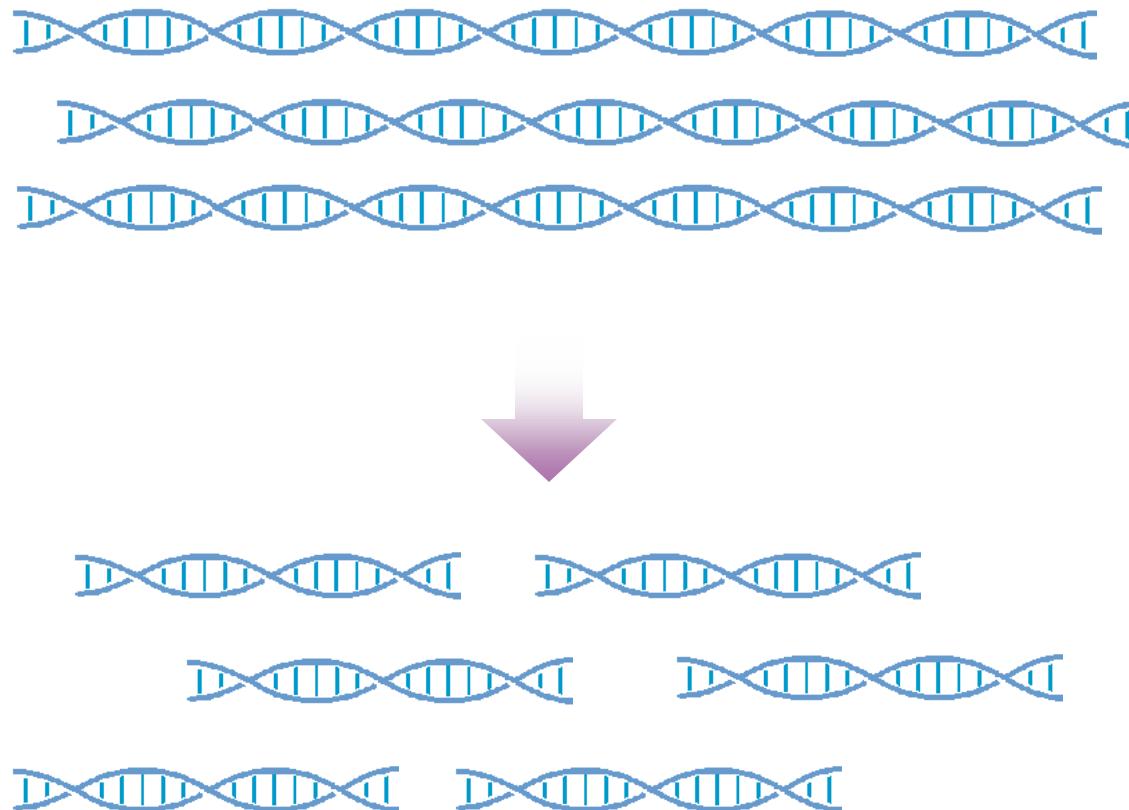

Infinium Assay Biochemistry

Whole-genome amplification

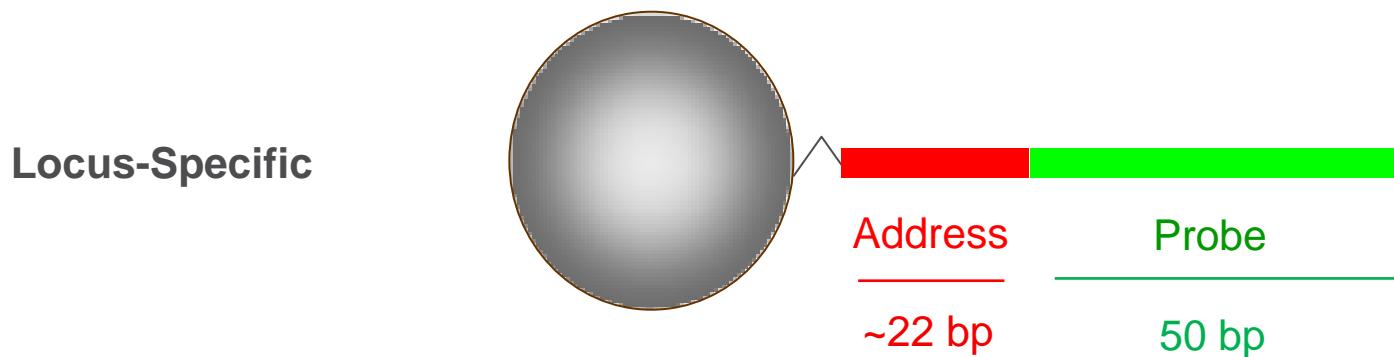

- ▶ Optimized WGA reaction minimizes GC bias
- ▶ Up to 1000-fold amplification

Fragmentation

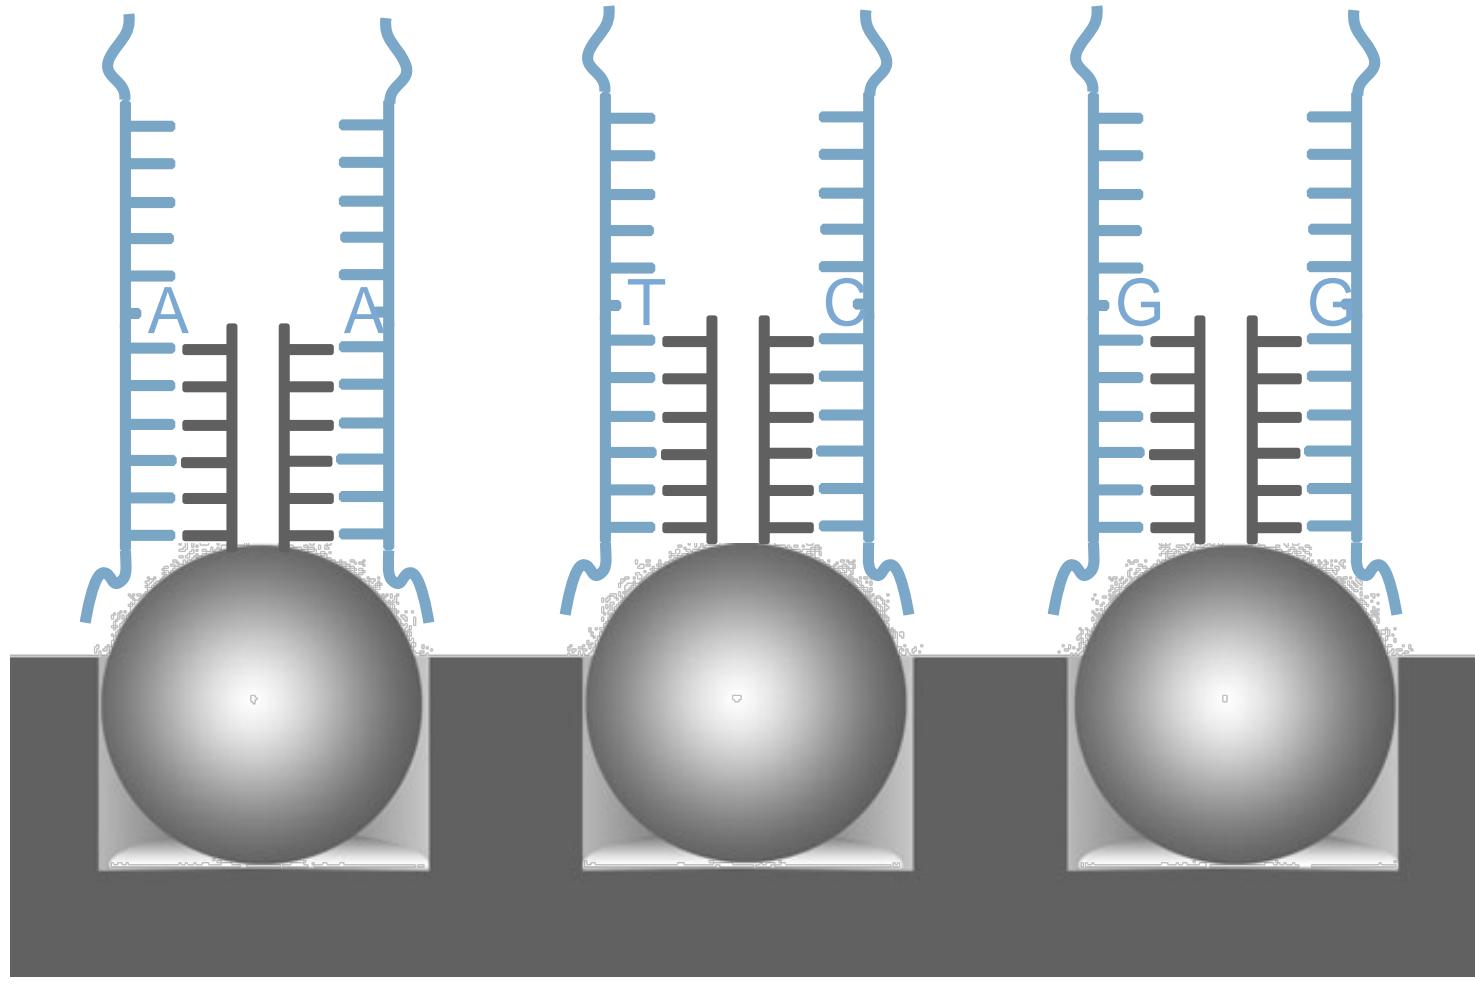

- Robust endpoint fragmentation
- Allows access to vast majority of genome

Infinium Probes and BeadTypes

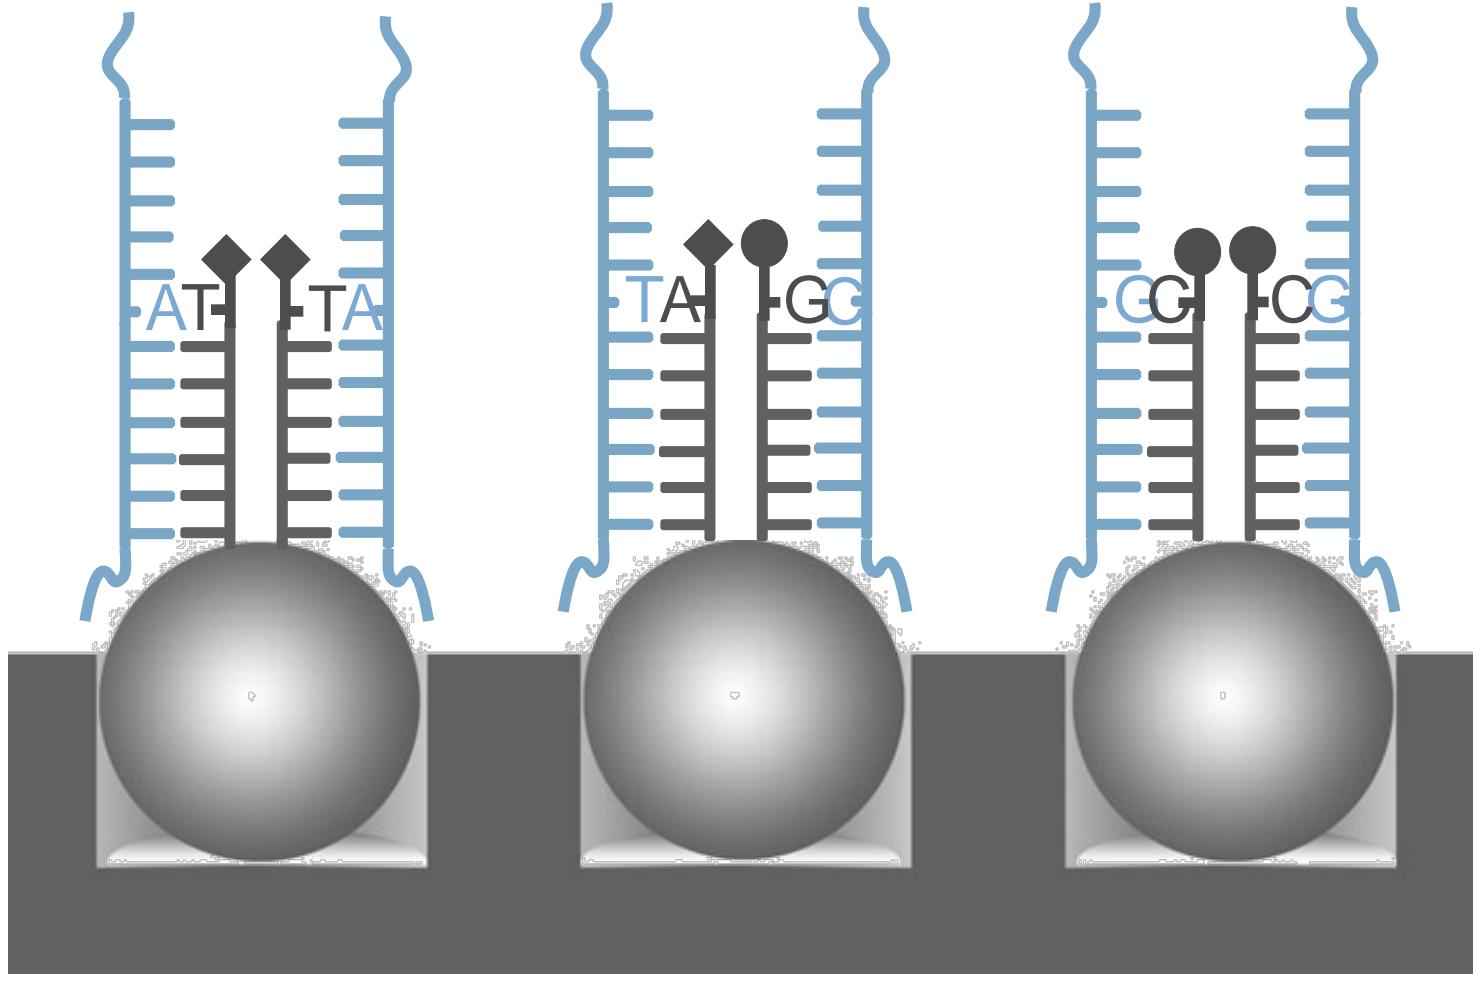

Hybridization

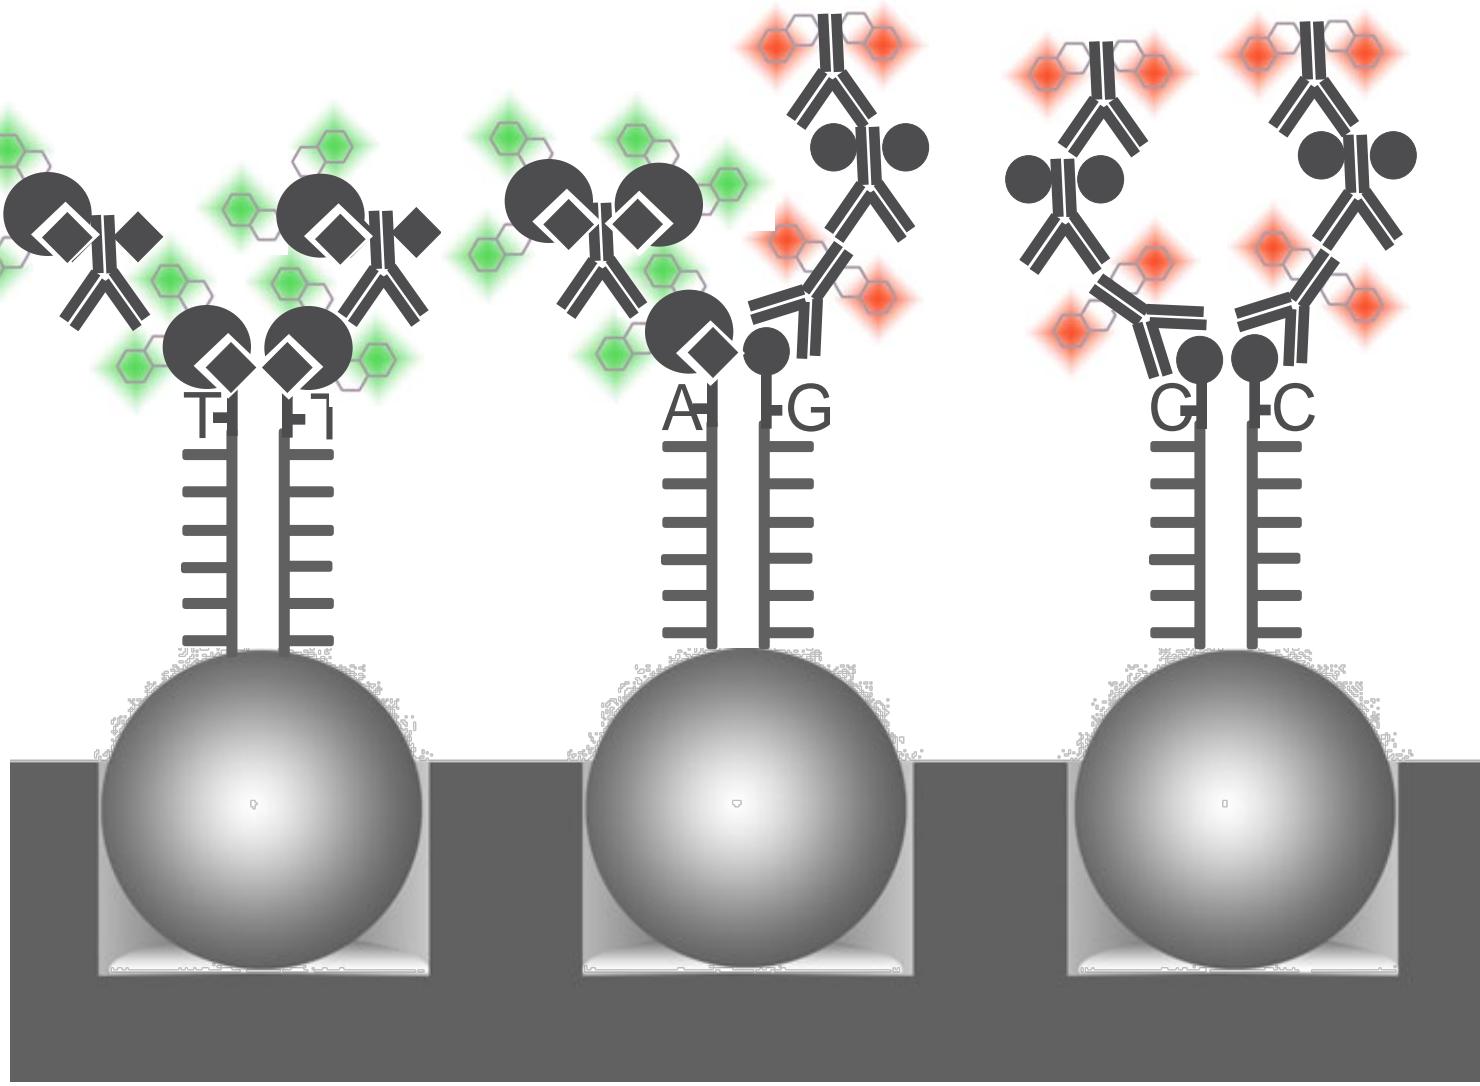

Single Base Extension

C  G 
dintrophenol-labeled
ddNTPs

A  T 
biotin-labeled ddNTPs

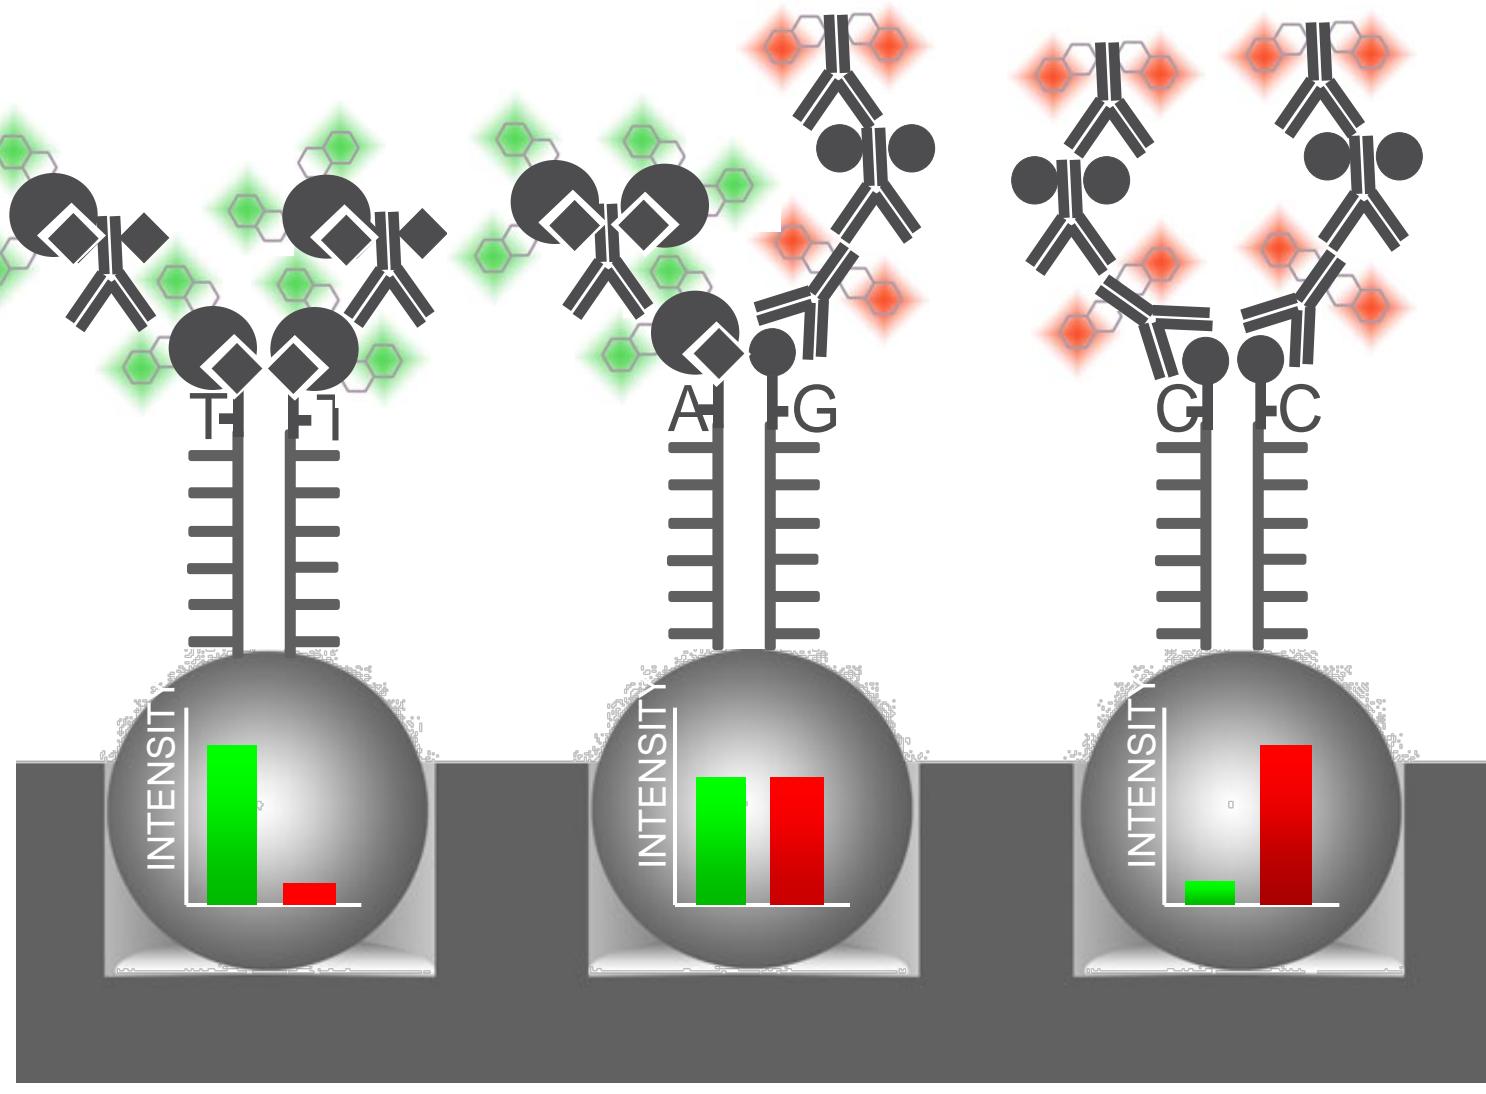

Stain

- streptavidin-green
- anti-DNP-red
- anti-streptavidin-biotin
- anti-Ab-DNP

Image

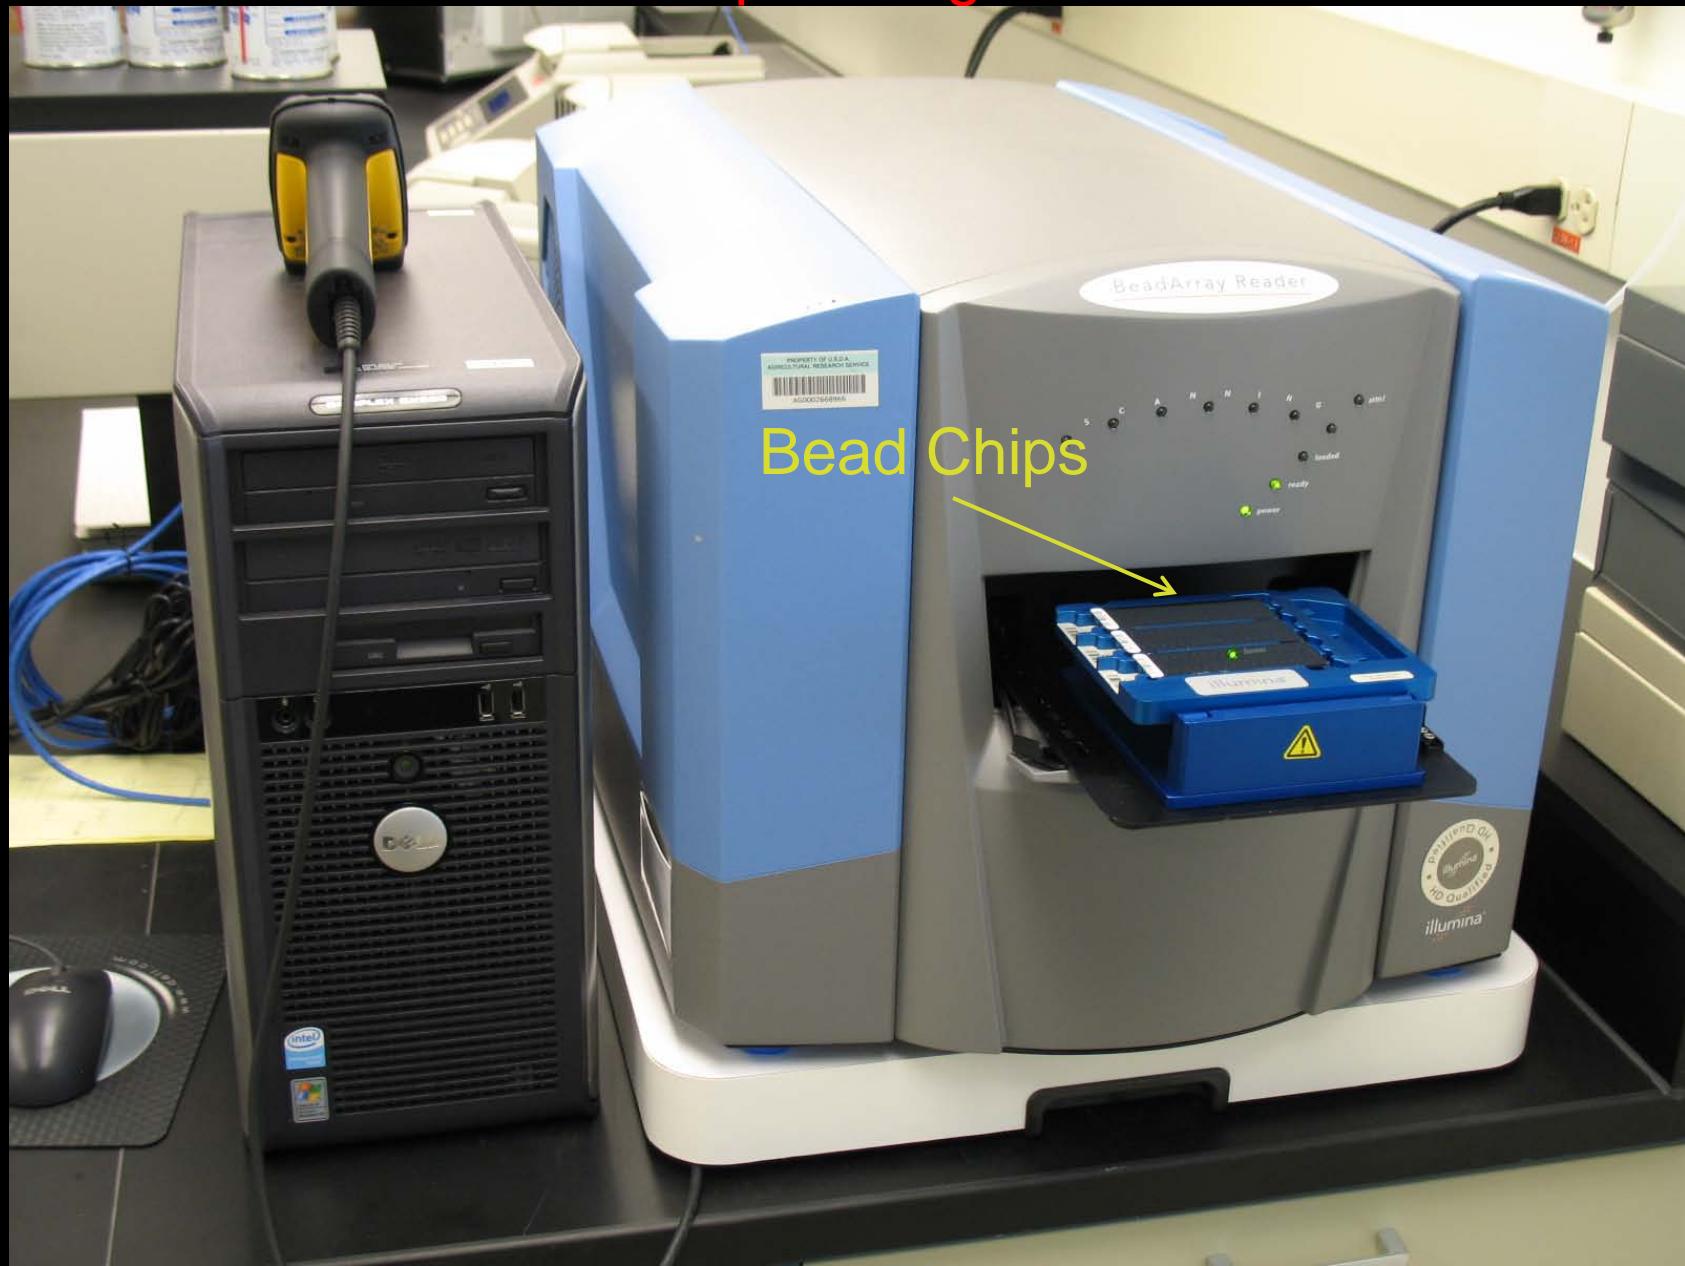

BeadChip Scanning and SNP Assay Detection

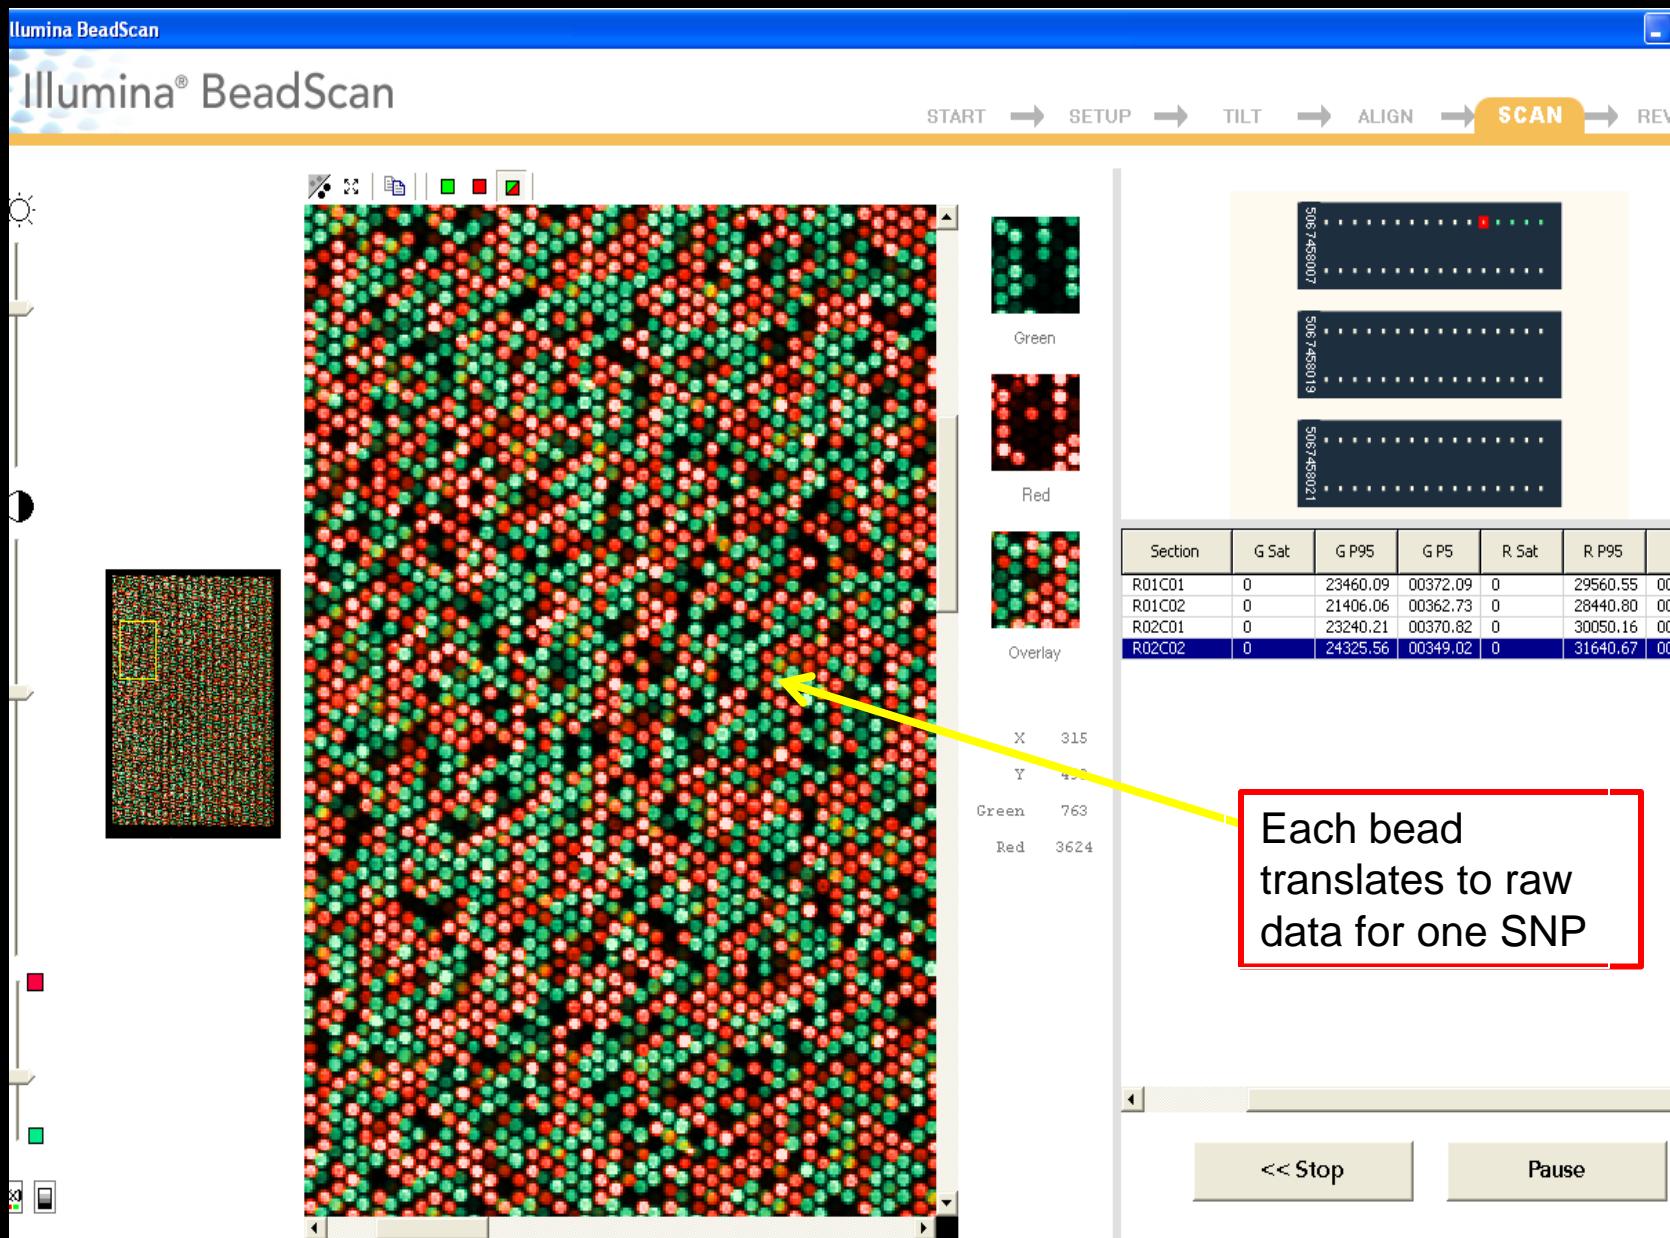

- Input file – .dmap files containing bead locations
- Output file – .idat files containing hybridization intensity data

BeadStation

To scan BeadChips and generate raw data

BeadChip scanning in progress

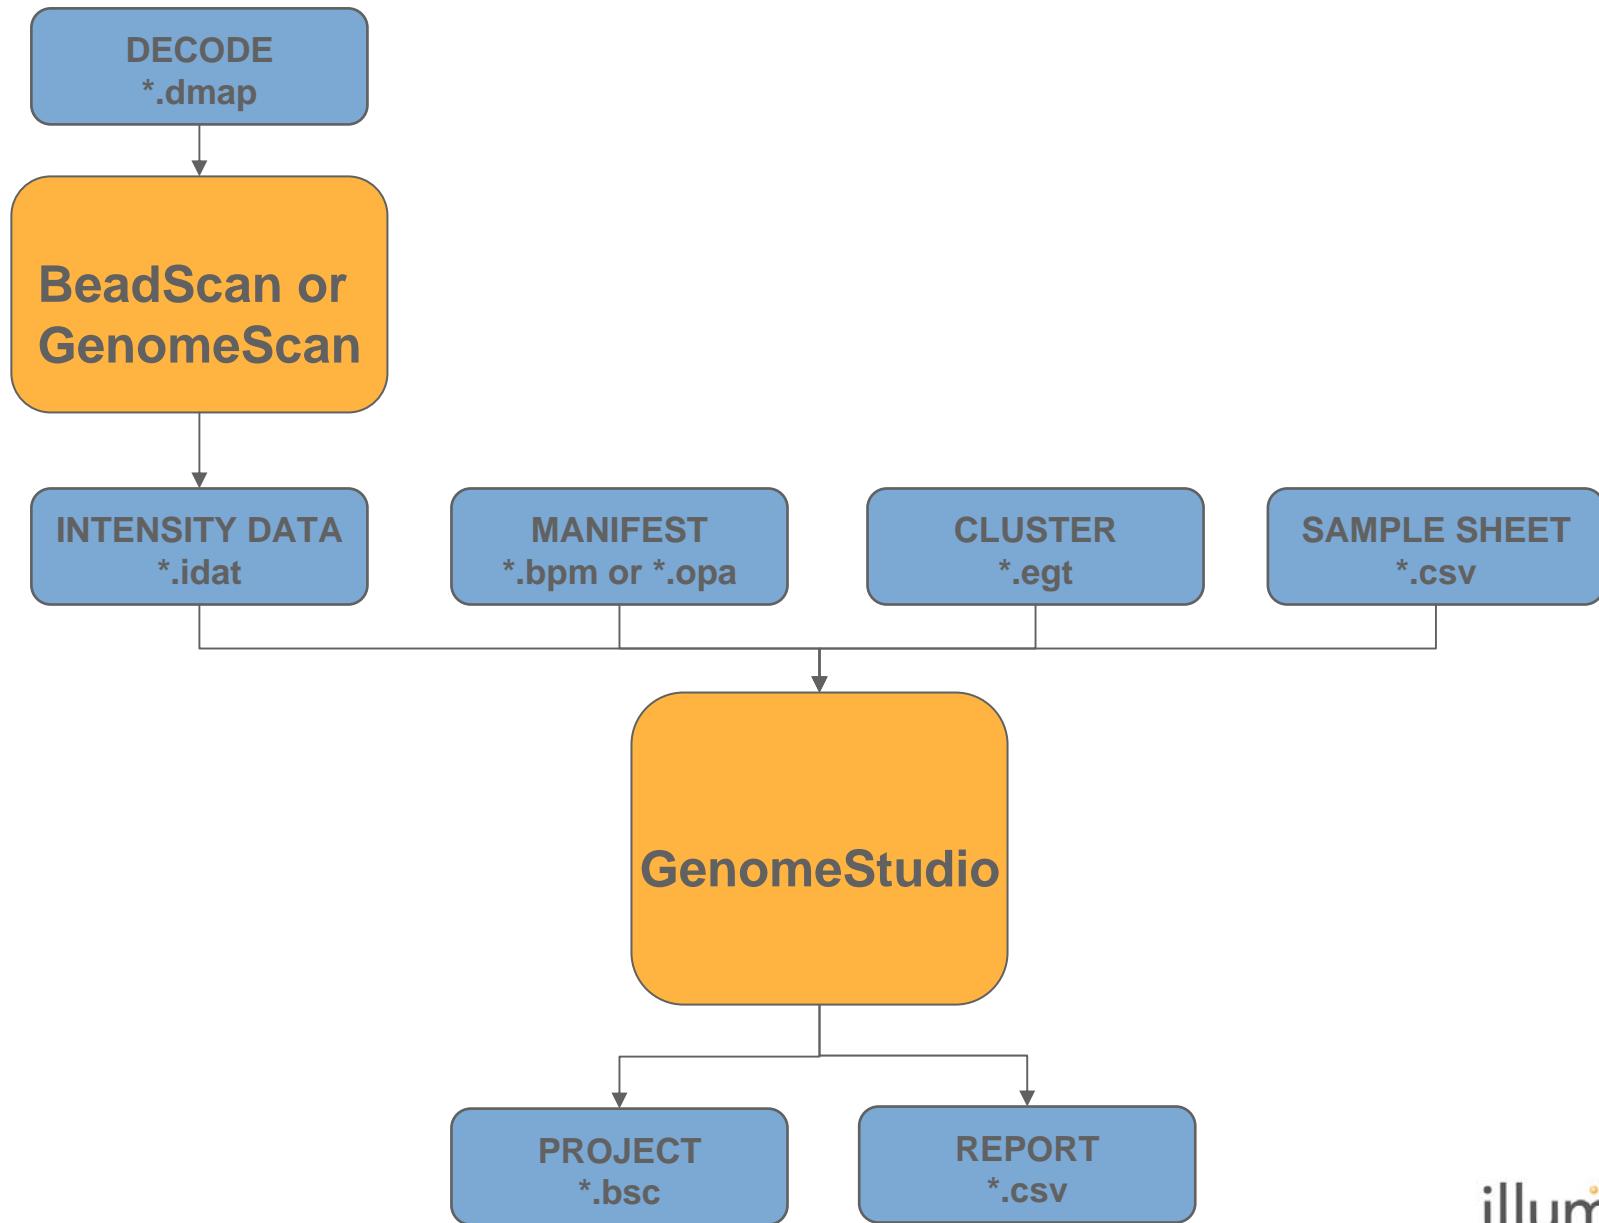

Data Analysis and Genotype Calling using GenomeStudio Software

Loading Data

File Types

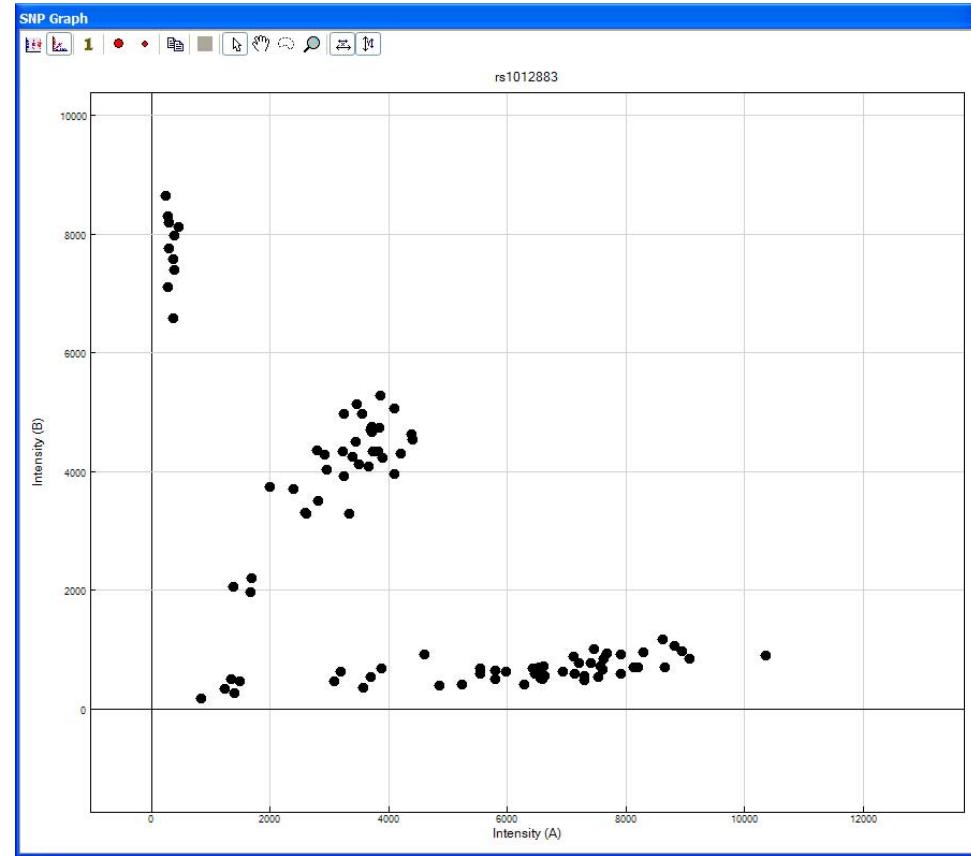

Load Data

<u>File</u>	<u>Extension</u>	<u>Description</u>	<u>Source</u>	<u>Required?</u>
Data	*.idat	Contains the mean red and green signal intensities for each bead type	GenomeScan	Yes
Manifest	*.bpm *.opa	Lists the SNP ID and annotation for each bead type	iCom	Yes
Cluster	*.egt	For each locus, defines the allowable signal intensity ranges for AA, AB, and BB genotypes	iCom / User-created	No
Sample Sheet	*.csv	For each sample, lists the microtiter plate locations, replicate and family relationship information	User-created	No

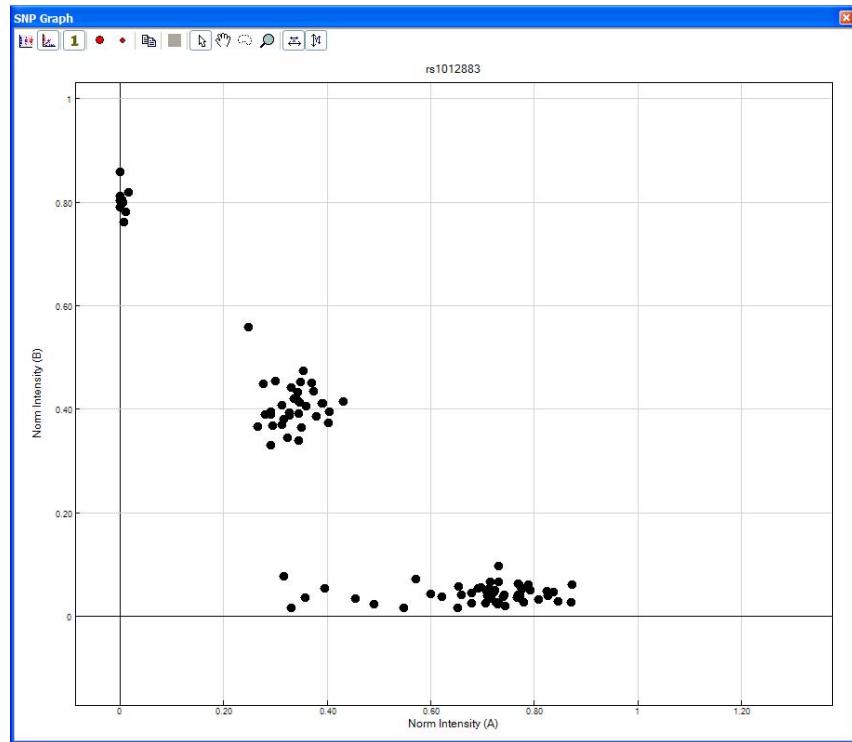

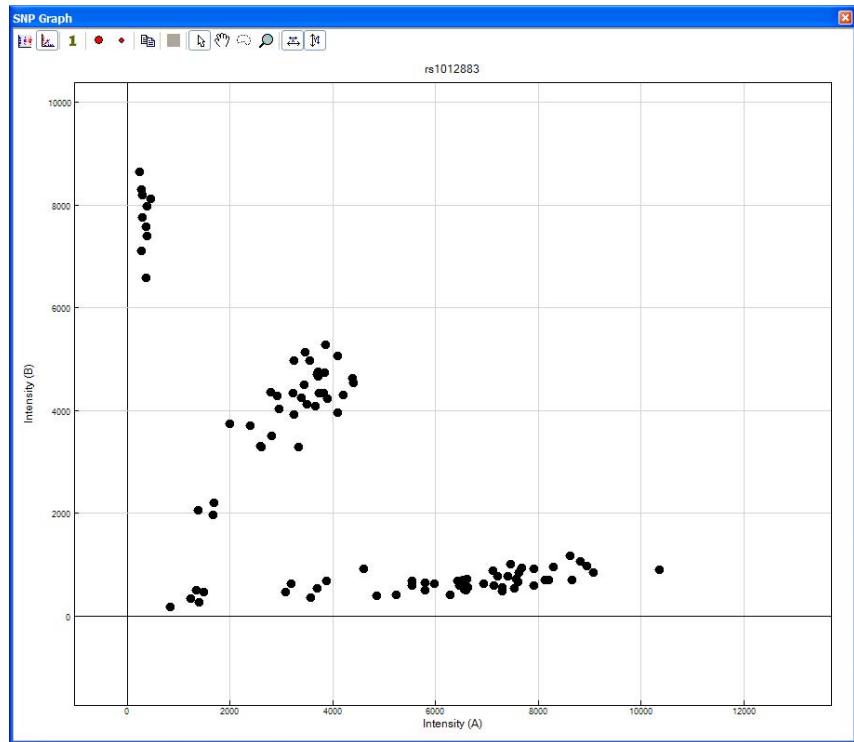

Plotting intensities in Cartesian space

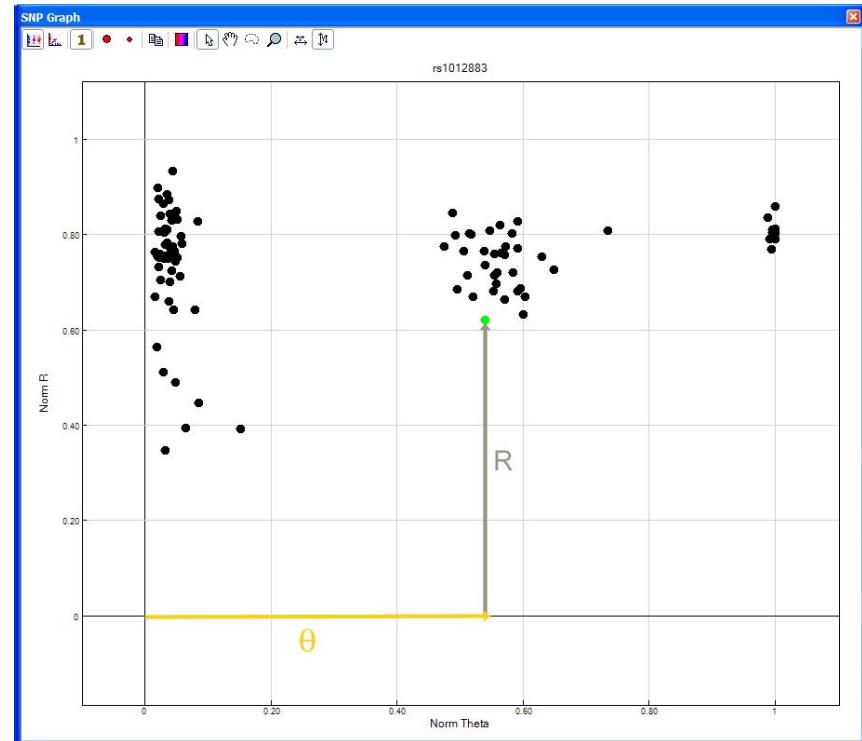

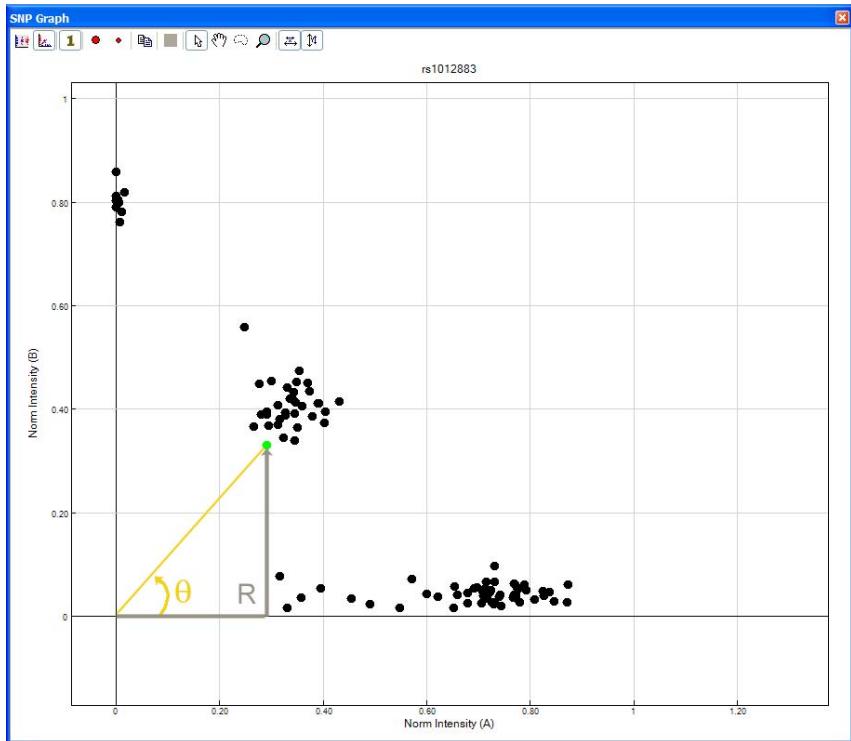

Signal intensities for 96 samples at one locus
Y axis is green signal intensity
X axis is red signal intensity

Normalization

Proprietary normalization algorithm

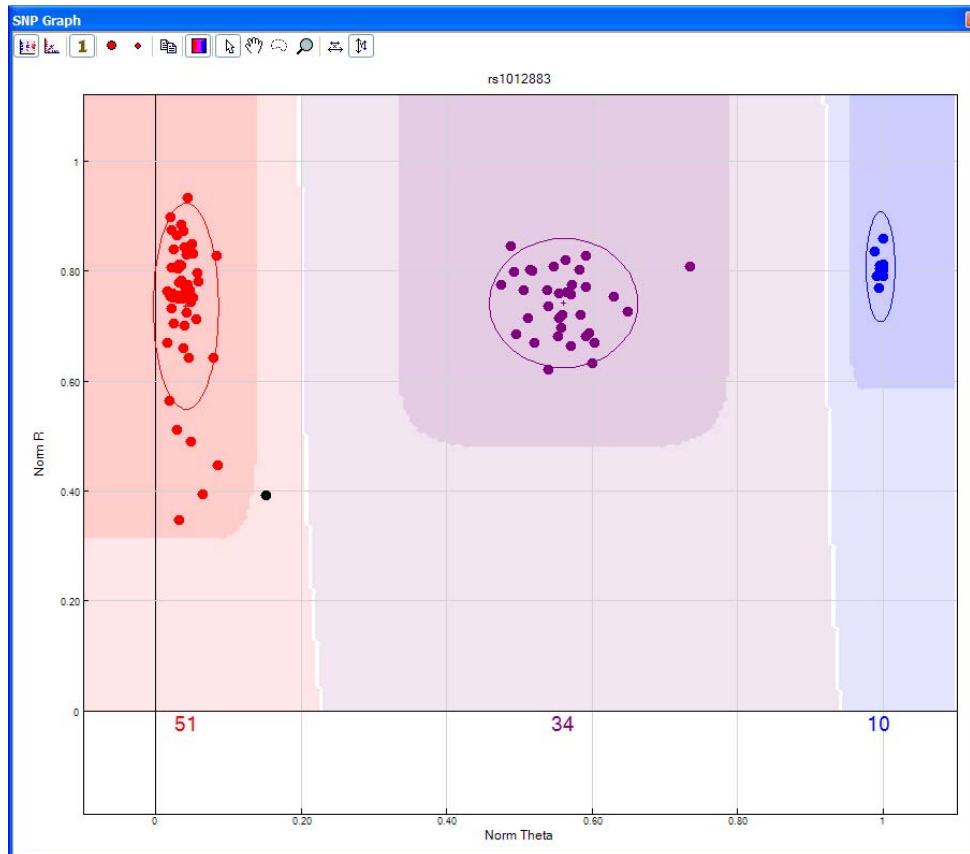

SNP Graph - Polar Coordinates

Θ = angle from X axis

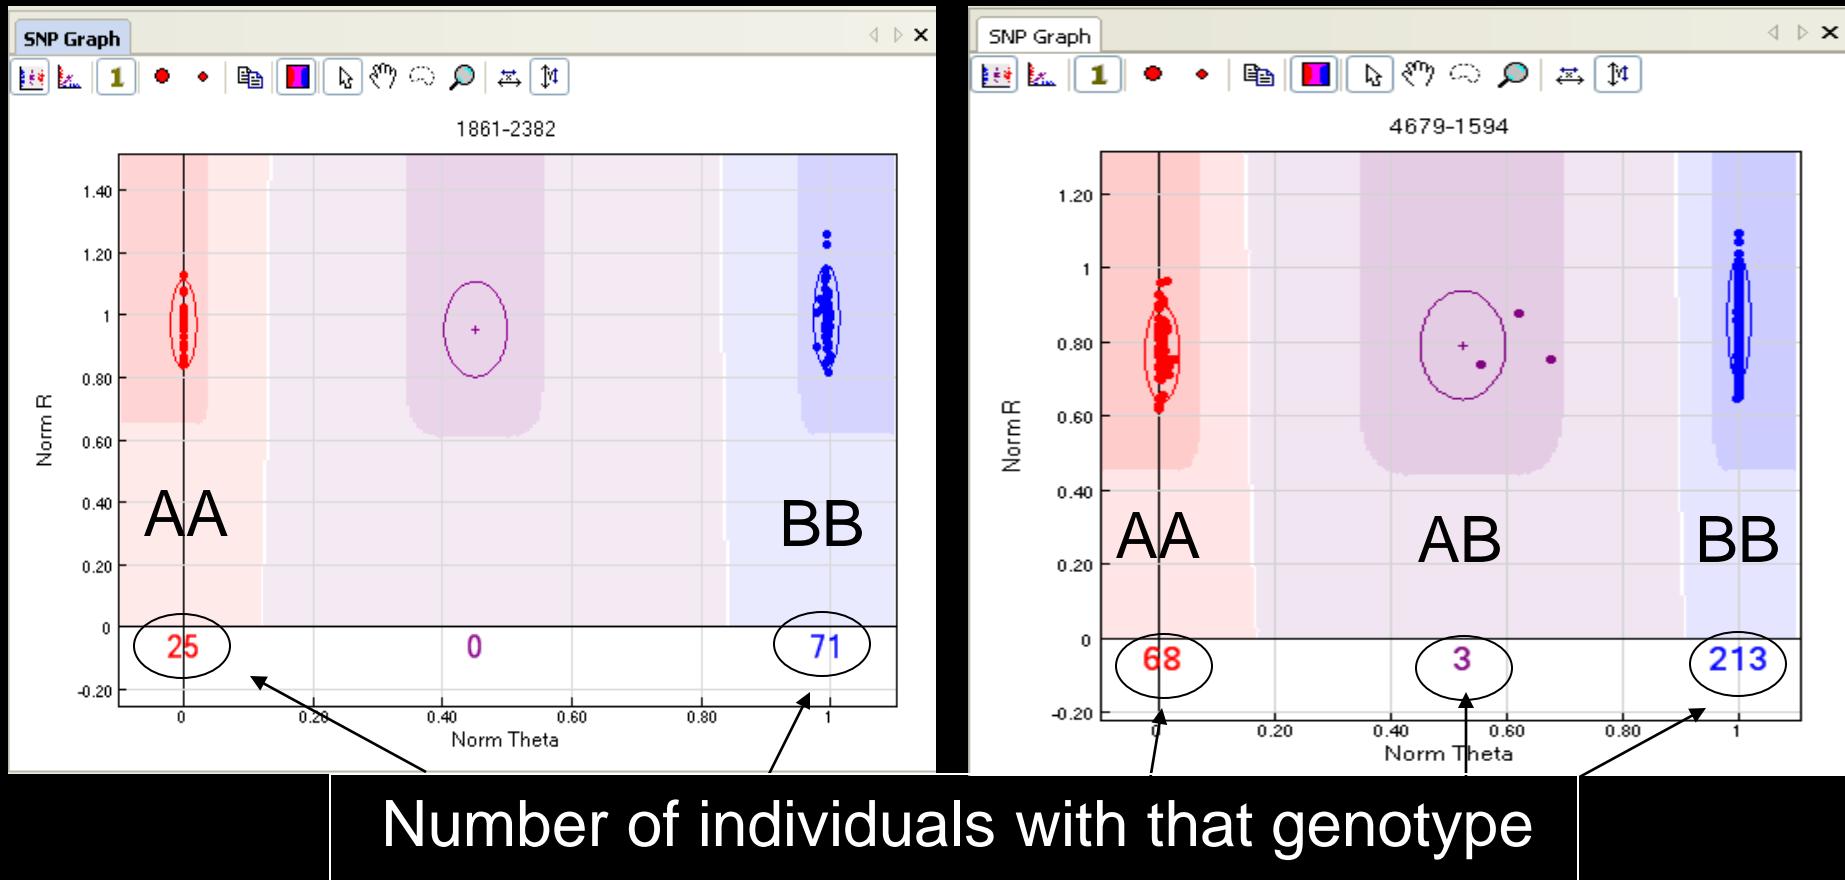

R = $A + B$

Clustering

- GenCall score reflects the distance of a data point to the centroid of a cluster
- GenCall score is a representation of the confidence with which a genotype call is made (GenTrain score and data to model fit)
- Dark shaded regions are call regions (GenCall score > 0.25 for GoldenGate and 0.15 for Infinium)

An Example of Barley SNP Genotype Calls
